brands hot leather and wood

## Instructions for use of the hot brand for wood

- 1 - After having formed the metallic support delivered, place the mark hot in the horizontal and connect the whole on the electrical network (220 Volts). Heat the whole. (Depending on the dimensions between 15 and 40 minutes) Do not heat the assembly suspended from the electric wire.
- 2 - Take a piece of wood identical to the one that will then be marked with the mark hot.
- 3 - On this piece of wood, make several appositions which will serve you to measure:
  - the duration of affixing
  - the pressure to be exercised

**NEVER TOUCH WITH THE FINGERS THE METAL PARTS OF THE HOT MARK  
RISK OF HIGH BURNS.**

- 4- When you have determined these two parameters, you can apply the hot iron to the wood to be marked by repeating the previous gestures.
- 5- When marking in series it is necessary to make regular breaks by placing the mark on the metal support horizontally in order to cool the plastic handle which tends to undergo the rising heat effect of the resistance.
- 6 - After disconnecting the brand hot and to cool it a good half an hour before storing it.
- 7 - If cleaning is required, once the iron has cooled down, wipe with a cloth dampened with alcohol. Especially do not scratch with a metal object, you risk damaging the embossed relief of the brand hot
